L

Two-Post Parking Lifts – Smart Vertical Parking Solutions

Two-post parking lifts are an advanced and space-efficient solution designed to maximize parking capacity in residential, commercial, and urban environments. By utilizing a compact vertical structure supported by two heavy-duty columns, vehicles can be safely stacked one above another, effectively doubling parking space without the need for costly construction or land expansion.
These lifts are ideal for locations where ground space is limited, but vehicle storage demand is high. Their streamlined design allows for easy integration into private garages, apartment complexes, commercial parking areas, and narrow urban courtyards.

Reliable & Safe Operation
The operation is simple and user-friendly. The driver positions the vehicle onto the platform, secures it, and activates the hydraulic lifting system. The lift then smoothly raises the vehicle to the upper parking position.
Every HIDROTILTAI parking lift is engineered with advanced safety systems, including:

- Mechanical locking mechanisms
- Hydraulic stability control
- Load and weight monitoring sensors
- Anti-fall safety features

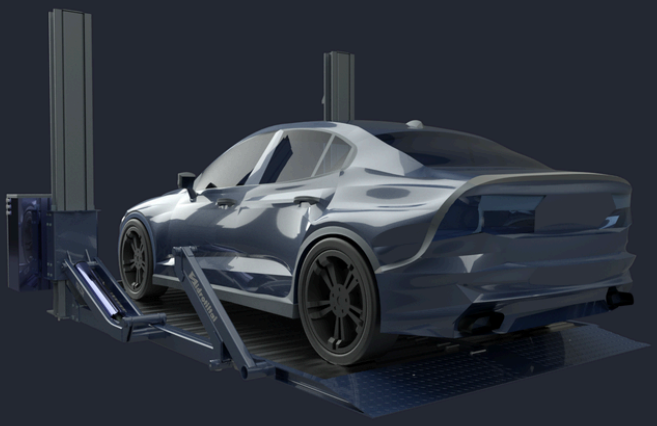

These systems ensure maximum operational safety and long-term durability.

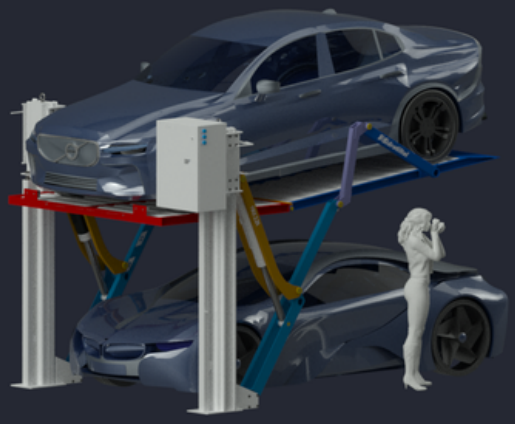

Two Types of HIDROTILTAI Parking Lifts
HIDROTILTAI manufactures two main parking lift configurations:

Driver-Operated Parking Lifts
Vehicles are parked and retrieved directly by the driver. This system is ideal for residential complexes and controlled parking environments where individual access is required.

Multi-Vehicle Parking Lifts (2–4 Cars)
Designed to increase parking density, these systems allow two or four vehicles to be stacked vertically, significantly expanding parking capacity within the same footprint.

Optional ROTEXS Car Turning Platform
Each parking lift model can be equipped with a ROTEXS car turning platform.
This solution is particularly valuable when the lift is installed in narrow yards or confined spaces where vehicle maneuvering is difficult. The rotating platform allows cars to turn safely without reversing or complex maneuvering, improving both convenience and safety.

MODEL VPORT 2.3 Two-Post Parking Lift

The VPORT 2.3 Two-Post Parking Lift is specifically engineered for convertible vehicles and applications where improved accessibility is essential.

Unlike standard vertical lifts, the VPORT 2.3 features a unique lifting mechanism: as the platform rises, the rear section elevates evenly, creating a 6-degree incline in the upper position. This controlled angle provides additional clearance and practical advantages for vehicle positioning and user comfort.

Optimized for Convertibles & Comfort

The inclined upper platform makes this model particularly suitable for:

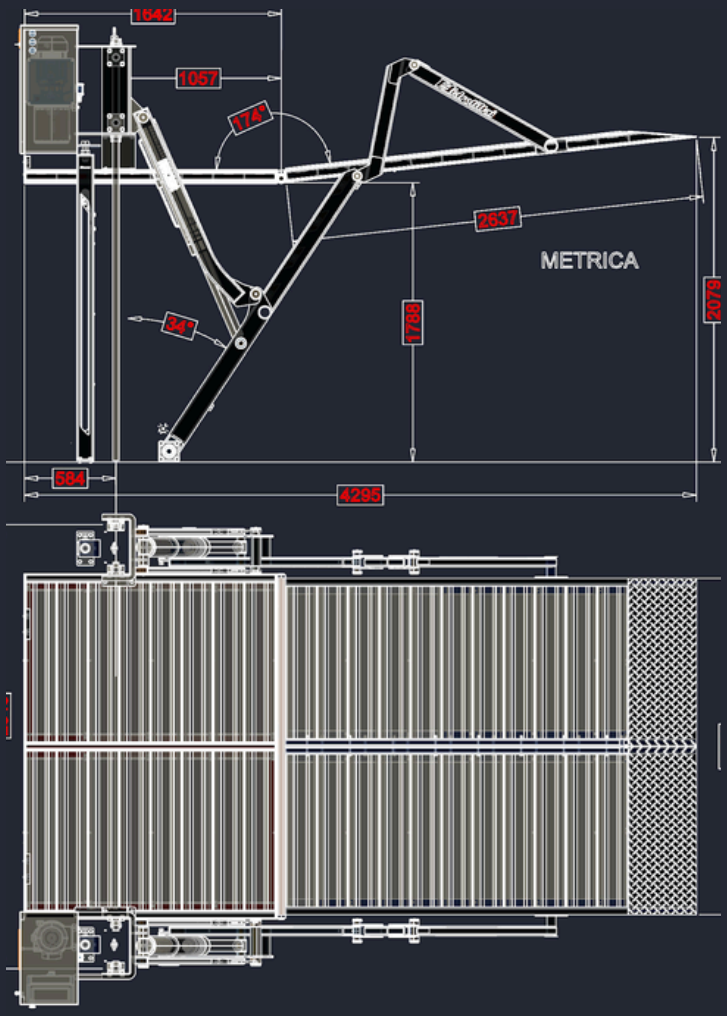

- Convertible vehicles
- Vehicles requiring adjusted parking geometry
- Installations where an easier, lower-level exit is necessary
-

One of the key functional benefits of the VPORT 2.3 design is improved convenience for drivers exiting the vehicle parked in the lower position. The slight elevation of the upper platform creates more ergonomic access space below.

Key Advantages

- 6° angled upper platform design
- Smooth hydraulic lifting system
- Improved access to lower-parked vehicles
- Ideal for convertible parking solutions
- Space-efficient two-post structure

The VPORT 2.3 is a refined vertical parking solution that combines structural simplicity with enhanced user comfort and specialized vehicle compatibility.

MODEL VPORT 3.2

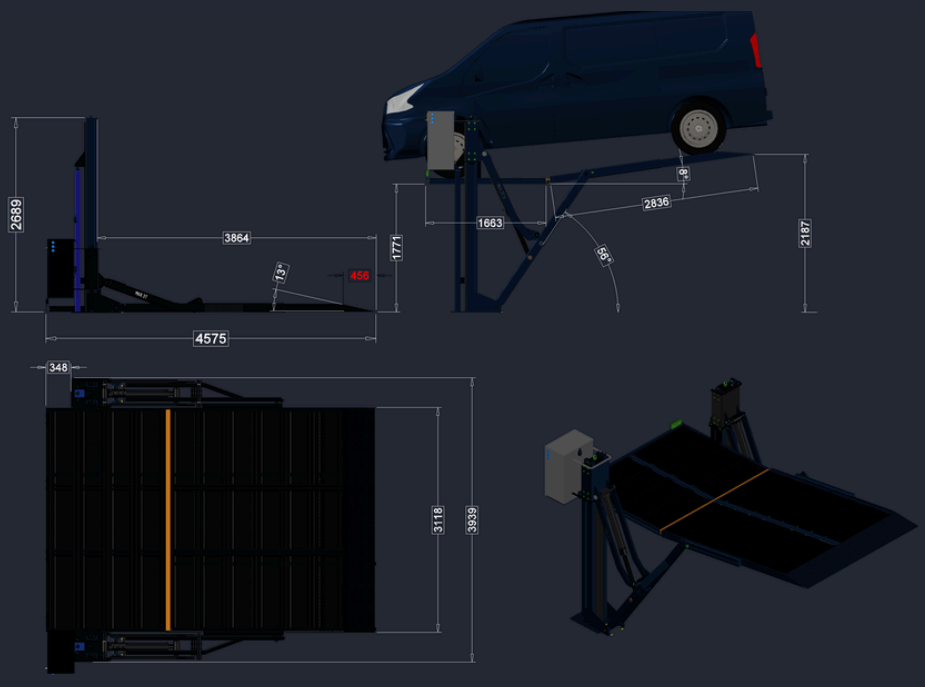

MODEL VPORT 3.2 Two-Post Parking Lift with 7° Inclined Platform

This two-post parking lift is specifically designed for convertible vehicles and installations where improved accessibility and additional platform width are required.
As the lift rises, the rear section of the platform elevates evenly, forming a 7-degree incline in the upper position. This engineered angle enhances vehicle positioning while significantly improving convenience for users accessing the lower parked vehicle.
The inclined configuration creates more ergonomic exit space, making daily use more comfortable and practical in confined parking environments.
A key advantage of this model is its widened platform design. Thanks to the extended width, the system is also suitable for larger vehicles, including minibuses such as the Volkswagen Transporter T7.

Key Benefits

- 7° inclined upper platform
- Enhanced accessibility for lower-level vehicles
- Widened platform construction
- Suitable for convertibles and larger vehicles
- Stable and reliable hydraulic lifting system
- Space-efficient vertical parking solution
-

This model combines comfort, flexibility, and increased vehicle compatibility, making it a versatile solution for both residential and commercial parking projects.

MODEL PERIHEL

PERIHEL Two-Post Parking Lift

The PERIHEL Two-Post Parking Lift is a practical, space-efficient, and cost-effective parking solution engineered and manufactured by HIDROTILTAI. Designed for reliable vertical vehicle stacking, the system lifts a vehicle from the lower parking position to the upper level while maintaining a perfectly horizontal platform position throughout the entire lifting process.
A key technical advantage of the PERIHEL system is its lifting platform, which is raised by telescopic hydraulic cylinders. This solution ensures smooth, stable, and synchronized lifting performance while maintaining structural simplicity and long-term operational reliability.

The fixed horizontal lifting concept provides exceptional stability and efficient use of space, making PERIHEL an ideal solution for residential garages, private parking areas, apartment buildings, and low-traffic commercial applications.
Designed for Practical Daily Use

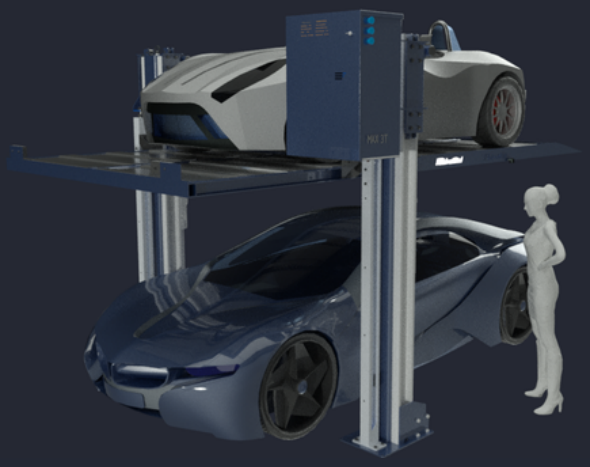

The PERIHEL model is engineered with a clear and user-friendly parking concept:

- Lower parking position – intended for daily use and frequent vehicle access
- Upper parking position – ideal for long-term or secondary vehicle parking

This practical configuration makes PERIHEL particularly suitable for households with multiple vehicles and properties where efficient parking space optimization is essential.
Key Advantages

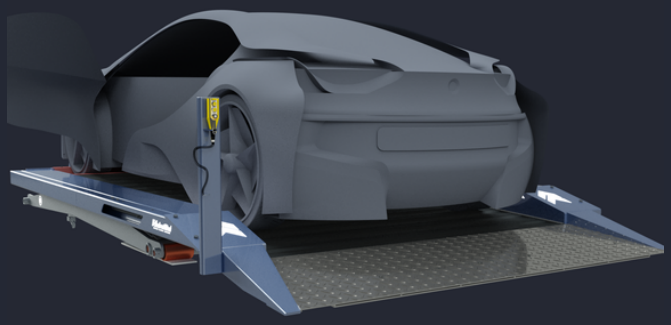

- Robust and durable two-post steel structure
- Platform lifting by telescopic hydraulic cylinders
- Smooth and reliable hydraulic lifting system
- Space-saving vertical parking solution
- Stable fixed-horizontal platform operation
- Ideal for residential and small commercial installations
- Low-maintenance and user-friendly design

The PERIHEL system represents an efficient entry-level vertical parking solution that combines simplicity, durability, and dependable hydraulic technology to maximize parking capacity without unnecessary mechanical complexity.

MODEL IXUR

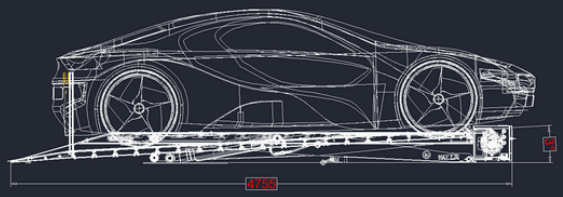

IXUR Luxury Two-Post Parking Lift

Product Description

The IXUR Two-Post Parking Lift is engineered specifically for long-term luxury vehicle storage, combining precision mechanics, enhanced comfort, and advanced protection features.
In the lower position, the platform is positioned at a 3.5-degree entry angle, making vehicle access smoother and more ergonomic. Once raised, the platform automatically aligns the vehicle into a perfectly horizontal position, ensuring ideal long-term parking conditions.

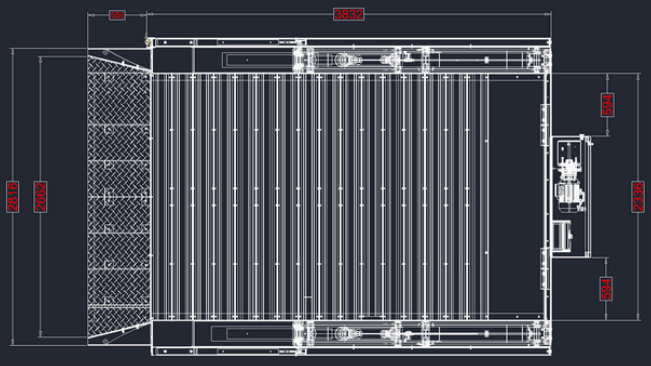

Engineered for Comfort & Protection

The access bridge features a widened entry mouth, allowing for easier and more precise vehicle alignment when driving onto the platform.
To protect the vehicle parked below, sealing gaskets are installed at the junctions of the sideboards and platform surfaces. This prevents even small amounts of moisture from reaching the lower vehicle — an essential feature for high-value and collector cars.

Smooth & Controlled Operation

Springs integrated into the hydraulic cylinders ensure:

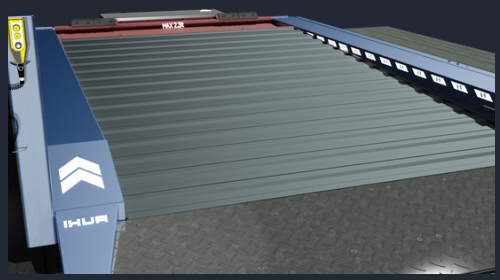

- Gentle platform descent
- Smooth lift start
- Reduced mechanical stress
- Enhanced operational comfort
-

All safety locks, hydraulic stops, and protection systems are mounted directly on the platform structure. This design eliminates obstructive elements beneath the raised lift, allowing free and safe movement under the platform when elevated.

Key Advantages

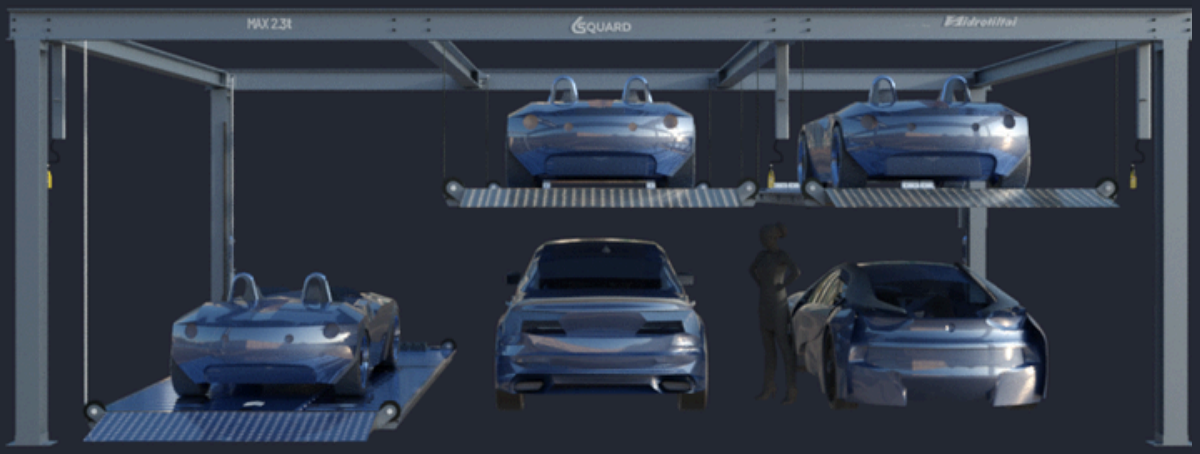

- 3.5° ergonomic entry angle
- Horizontal alignment in raised position
- Moisture protection system
- Widened access bridge
- Smooth hydraulic start and descent
- Clear space beneath the raised platform
- Designed for long-term luxury vehicle storage
-

The IXUR model represents a refined and technically advanced vertical parking solution, ideal for premium residential garages, private collectors, and exclusive commercial installations.

MODEL SQUARD

SQUARD Outdoor Multi-Vehicle Parking Lift

Product Description

The SQUARD Parking Lift shares the kinematics and construction principles of the AQUARD model, but is specifically designed for outdoor, multi-vehicle applications.

This model features four independent parking columns, allowing six vehicles to be parked simultaneously. Unlike AQUARD, which requires a supporting wall and is intended for indoor use, SQUARD is engineered for public outdoor spaces, providing flexible and efficient parking solutions.

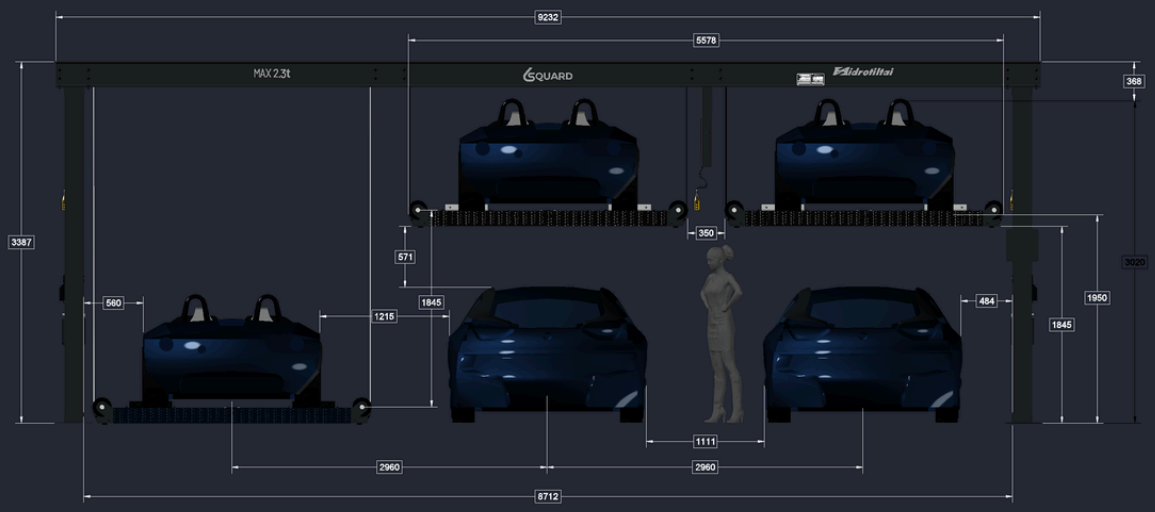

Independent Operation

Each vehicle platform is controlled via a separate control panel connected by cable, ensuring precise and safe operation for every lift position. This setup allows for reliable management of multiple vehicles in public or commercial parking areas.

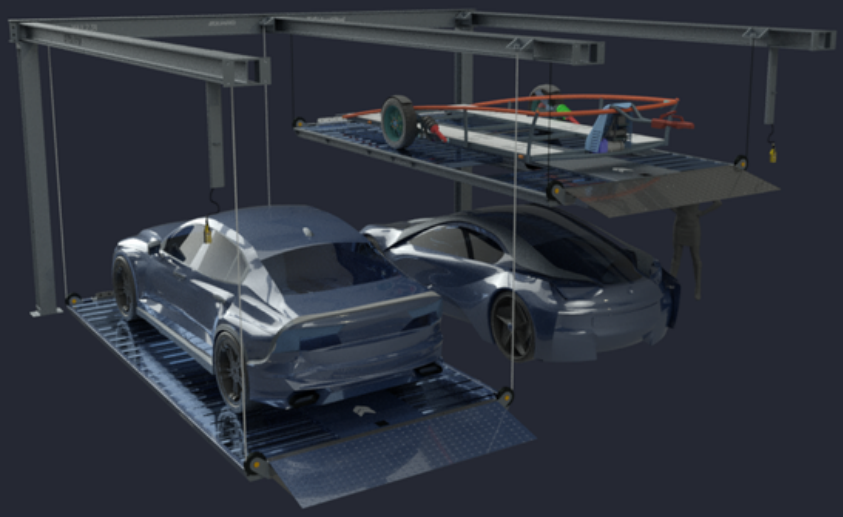

Key Advantages

- **Four independent parking columns**
- **Six-space vertical parking solution**
- **Designed for public outdoor use**
- **Separate control panel for each platform**
- **Reliable, safe, and space-efficient**
-

SQUARD combines robust outdoor construction with operational flexibility, making it ideal for city parking lots, commercial facilities, and high-capacity public parking projects.

MODEL AQUARD

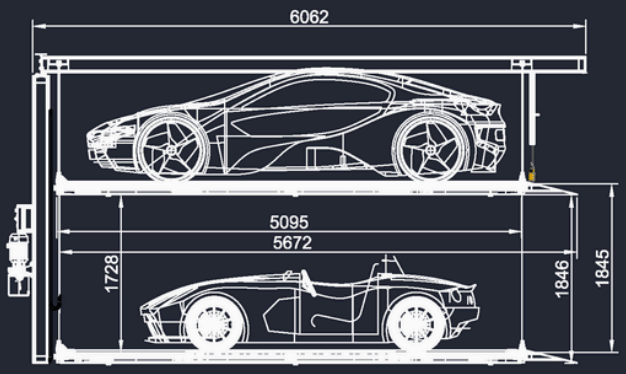

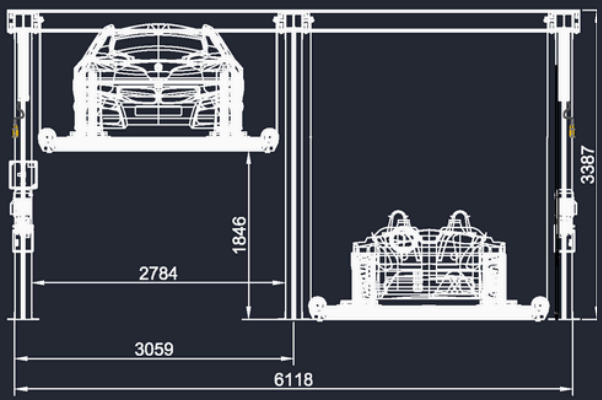

AQUARD Two-Level Parking Lift

Product Description

The AQUARD Two-Level Parking Lift is the most ergonomic model in HIDROTILTAI's two-level parking lineup. Once the vehicle is lifted to the upper level, there are no structural or mechanical elements below that interfere with parking, exiting the vehicle, or simply walking around.

A distinctive feature of the AQUARD model is that the entire hydraulic and lifting system is integrated directly into the platform structure. This innovative design keeps the lift visually clean, without exposed cylinders or other mechanical elements, combining functionality with a sleek and stylish appearance.

Key Advantages

- Fully ergonomic two-level design
- No obstructive elements under the upper platform
- Integrated hydraulic and lifting system
- Sleek, modern, and stylish appearance
- Ideal for residential and commercial installations
-

Meta Title

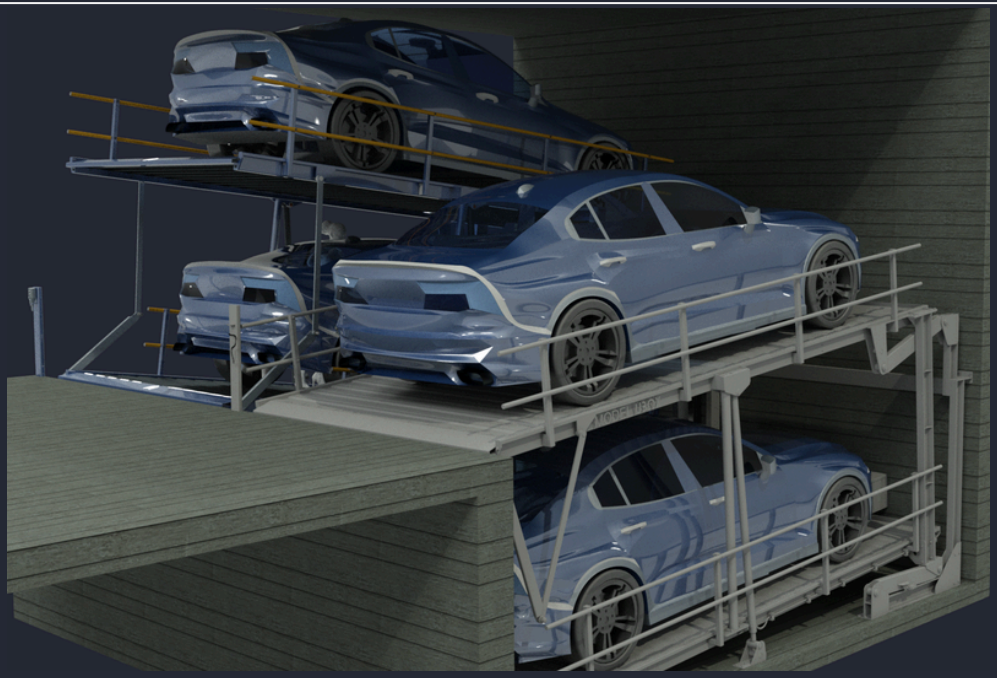

AQUARD Two-Level Parking Lift | Ergonomic and Stylish Vertical Parking

Meta Description

AQUARD two-level parking lift with a fully integrated hydraulic system and no obstructive elements below the upper platform. Ergonomic and modern design.

MODEL UBOX

UBOX Independent Two-Post Parking Lift

Product Description

The UBOX Two-Post Parking Lift is an independent hydraulic system designed for efficient vertical parking. Unlike conventional lifts, the UBOX allows the upper vehicle to be raised or lowered without moving the lower vehicle, providing maximum flexibility and convenience.

This model requires a prepared installation site. A pit approximately 1.8 meters deep must be concreted, enabling the parking floor to ceiling height to be reduced to around 3.2 meters. This design makes the lift suitable for spaces with lower ceilings while maintaining full functionality.

Ideal for Dynamic and Active Environments

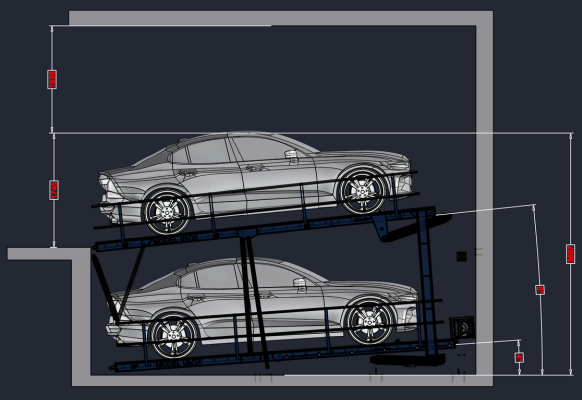

The UBOX lift is particularly well-suited for locations that demand fast, independent vehicle access, such as:

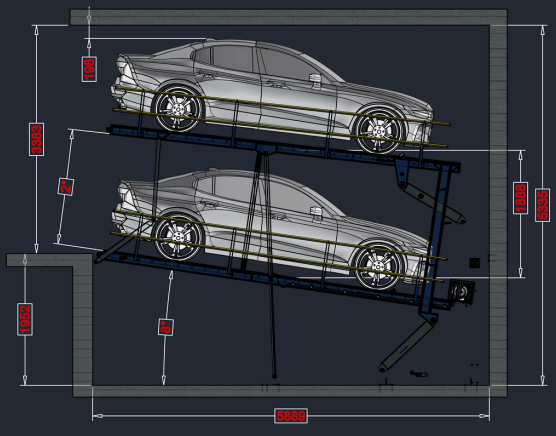

- **Student dormitories**
- **Sports complexes**
- **Entertainment facilities**
-

Its versatile, dynamically operated system provides quick and reliable vertical parking, appealing to young and active users who value convenience and efficiency.

Key Advantages

- **Independent hydraulic operation of upper and lower vehicles**
- **Compact installation with a pit requirement**
- **Ideal for lower ceiling heights (~3.2m)**
- **Suitable for dynamic, high-usage environments**
- **Efficient, fast, and flexible vertical parking**

MODEL ALTIMER

ALTIMER Cantilever Two-Post Parking Lift

Product Description

The ALTIMER Two-Post Parking Lift is a cantilever-type hydraulic system designed for maximum space efficiency and structural stability.

Key Features

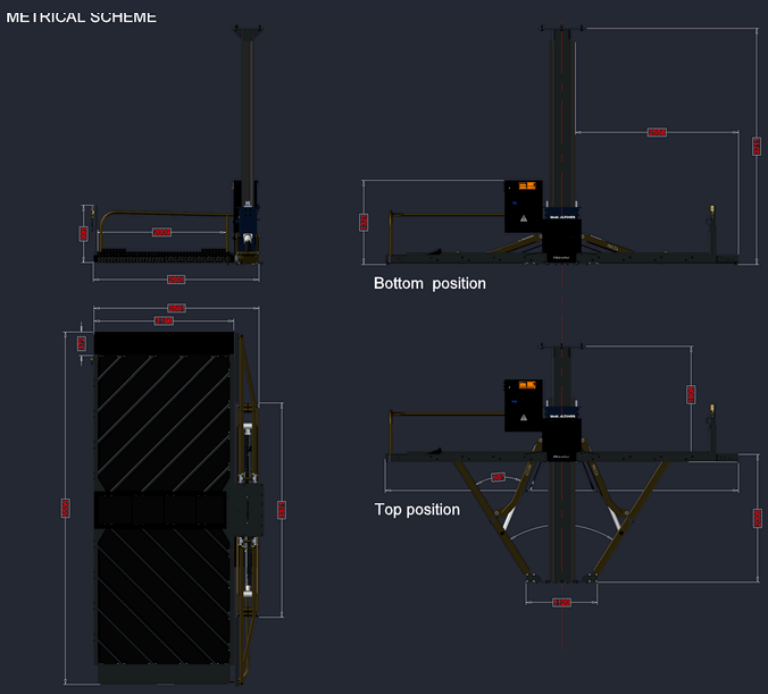

- Three support points for superior stability during lifting
- Minimal platform deformation for safer and smoother operation
- Support-guide column fixed only to the floor and ceiling, leaving the lower area completely free
-

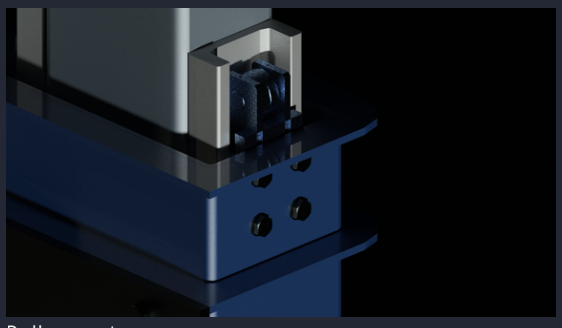

Thanks to its cantilever design, the lower garage space remains fully accessible when the platform is raised, allowing easy movement and parking of additional vehicles.

Ideal For

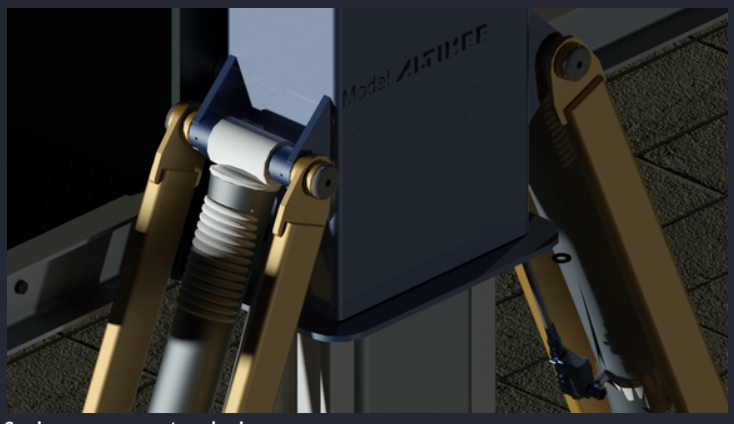

- Modern residential garages
- Commercial parking spaces
- Projects where safety, space optimization, and smart engineering are priorities
-

ALTIMER combines innovative engineering with practical design, making it a premium choice for anyone looking to maximize parking efficiency without compromising style or safety.

Rollapparat

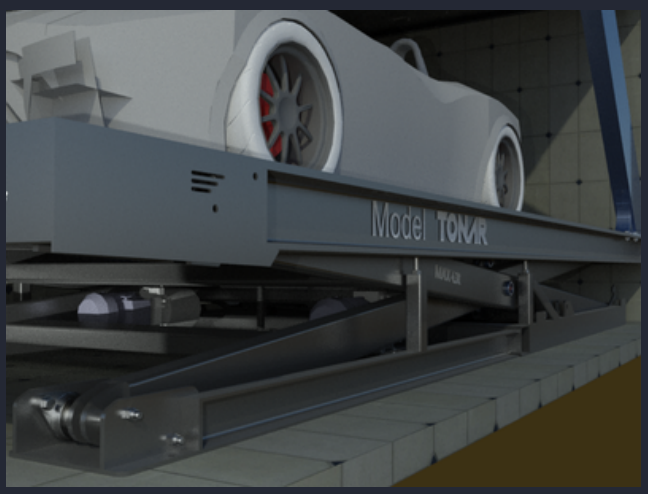

Spring compensator design

MODEL TONAR

TONAR Dock-Type Two-Platform Parking Lift

Product Description

The TONAR Two-Platform Parking Lift is a dock-type vertical parking system distinguished by its original structural design and enhanced ergonomics.

The system consists of two platforms mounted one above the other. Unlike conventional four-post parking lifts, the TONAR model supports the upper platform using only two uprights. This intelligent structural solution significantly improves accessibility and overall user comfort.

Designed for Easier Daily Use

With only two vertical supports, the lower parking space remains more open and accessible. This configuration:

- Does not obstruct vehicle doors
- Makes exiting the lower-parked vehicle easier
- Simplifies parking alignment
- Provides a more spacious feel

Compared to traditional four-support systems, parking on the lower platform is notably more convenient and ergonomic.

Adaptable for Various Environments

The TONAR model is suitable for a wide range of installations, including:

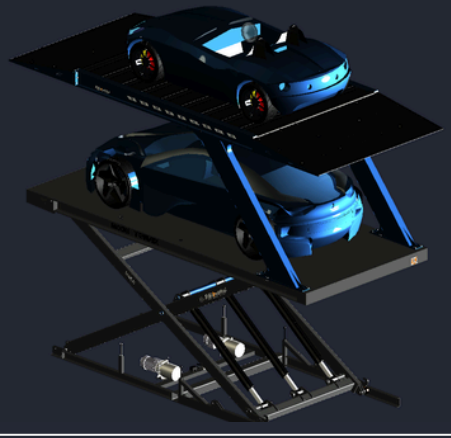

- Private residences
- Office parking facilities
- Hotels
- Commercial parking areas

Its clean structural layout and modern design make it an excellent choice for projects where both functionality and visual appearance matter.

Key Advantages

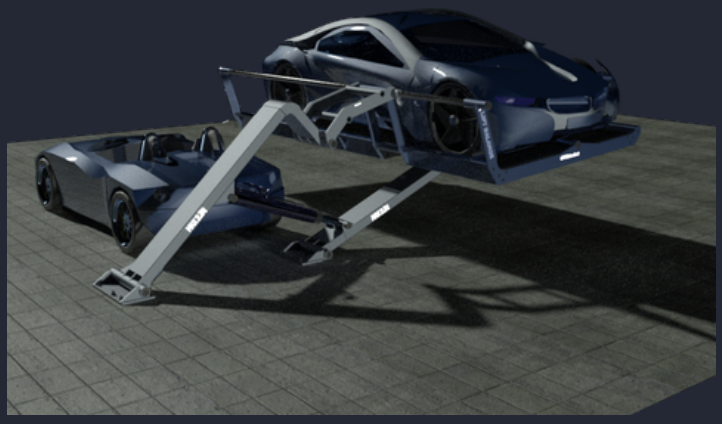

- Dock-type two-platform system
- Two-upright support design
- Improved accessibility to lower vehicles
- Ergonomic and modern construction
- Suitable for residential and commercial applications

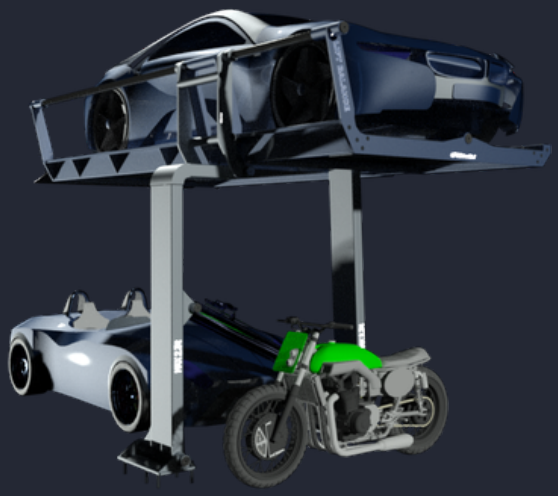

The TONAR parking lift combines structural efficiency with user-centered design, delivering a practical and visually refined vertical parking solution.

MODEL LIFT BALANCE

TONAR Dock-Type Two-Platform Parking Lift

Product Description
The TONAR Two-Platform Parking Lift is a dock-type vertical parking system distinguished by its original structural design and enhanced ergonomics.
The system consists of two platforms mounted one above the other. Unlike conventional four-post parking lifts, the TONAR model supports the upper platform using only two uprights. This intelligent structural solution significantly improves accessibility and overall user comfort.

Designed for Easier Daily Use
With only two vertical supports, the lower parking space remains more open and accessible. This configuration:

- Does not obstruct vehicle doors
- Makes exiting the lower-parked vehicle easier
- Simplifies parking alignment
- Provides a more spacious feel
-

Compared to traditional four-support systems, parking on the lower platform is notably more convenient and ergonomic.

Adaptable for Various Environments
The TONAR model is suitable for a wide range of installations, including:

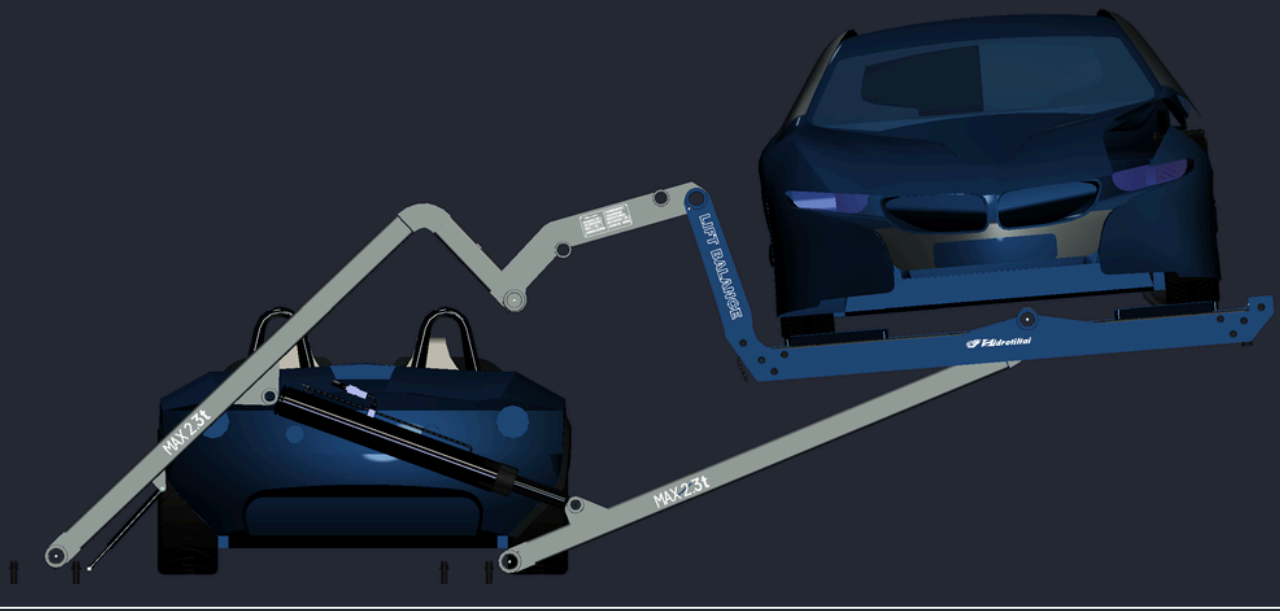

- Private residences
- Office parking facilities
- Hotels
- Commercial parking areas
-

Its clean structural layout and modern design make it an excellent choice for projects where both functionality and visual appearance matter.

Key Advantages

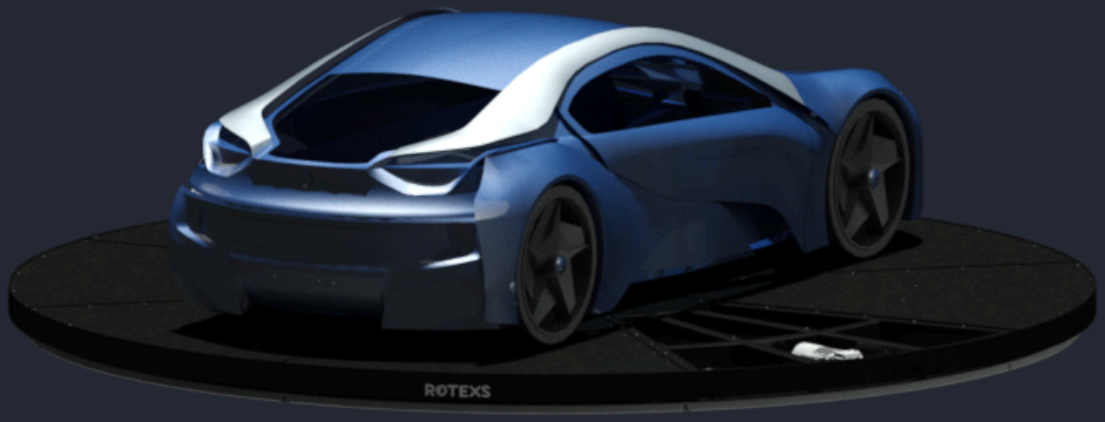

- Dock-type two-platform system
- Two-upright support design
- Improved accessibility to lower vehicles
- Ergonomic and modern construction
- Suitable for residential and commercial applications
-

The TONAR parking lift combines structural efficiency with user-centered design, delivering a practical and visually refined vertical parking solution.

ROTOND

Every parking lift system manufactured by HIDROTILTAI can be integrated with a vehicle turntable platform to ensure maximum driver comfort and convenient vehicle handling. After the parking process, the customer receives the car already positioned in the forward driving direction, eliminating the need for difficult reversing maneuvers in confined parking spaces or underground garages.

For this solution, HIDROTILTAI cooperates with its trusted partner ROTEXS.com, whose high-quality vehicle turntables are combined with HIDROTILTAI hydraulic parking systems. This integration creates a complete and efficient parking solution focused on convenience, safety, and smooth vehicle movement in modern parking environments.

Assembled in LITHUANIA
